

# Health issues related to Holi colors

Hi, I would appreciate it if you could fill out this survey for me. The survey should take approximately a minute to fill out. It is about the potential health issues related to the use of colored powders and liquids while playing Holi- the Indian festival of colors.

This survey is my final assignment for the course, 'Data Management for Clinical Research' by Vanderbilt University on Coursera. The data collected will be used to create a summary report containing a rough analysis of the data and submitted to Coursera.

Thank you.
